Education

SIES Graduate School of Technology <i>Bachelor of Engineering in Artificial Intelligence And Machine Learning</i>	Nov. 2022 – May. 2026 Navi Mumbai, MH
Karmaveer Bhaurav Patil College <i>HSC – Percentage : 63.83/100</i>	2022 Navi Mumbai, MH
Swami Vivekanand Sankul, Sanpada <i>SSC – Percentage : 79.00/100</i>	2020 Navi Mumbai, MH

Technical Skills

Languages: Python, SQL, PySpark, JavaScript (React)
Frameworks & Backend: FastAPI, Flask, Git, GitHub, REST APIs, MySQL, ChromaDB
AI/ML & LLM Technologies: Retrieval-Augmented Generation (RAG), Prompt Engineering, LangChain, LangGraph, Hugging Face Transformers, PEFT (LoRA), LLM Fine-Tuning (LoRA/QLoRA), Open-Weight LLMs (Llama, Mistral, Qwen), Embedding Models, Vector Databases (ChromaDB, FAISS), Ollama)
Concepts: Transformer Architecture, LLM Fine-Tuning, Semantic Search, Embeddings, Vector Search, Distributed Computing, Data Warehousing, Data Modeling, Agile Development

Experience

Jio Platforms Limited(JPL) <i>AI/ML Engineer Intern</i>	Jan 2026 – Jul 2026 Navi Mumbai, MH
- Built Jio BA, integrating data ingestion, audit reconciliation, and a RAG-powered NL2SQL engine for RAFM workflows. - Integrated the Qwen2.5-Coder open-weight LLM into an enterprise RAG-powered NL2SQL pipeline, enabling context-aware SQL and PySpark code generation using telecom schema knowledge. - Developed a RAG pipeline using LangChain, Hugging Face, and FAISS/ChromaDB for natural language querying over Hive/HDFS datasets.	
Jio Platforms Limited(JPL) <i>Data Engineer Intern</i>	Jul. 2024 – Dec 2024 Navi Mumbai, MH
- Built 10+ big data ingestion pipelines using PySpark, Python, Hive, and HDFS for Revenue Assurance data integration. - Performed 15+ audit reconciliations, ensuring data quality and accuracy across RAFM datasets. - Optimized ETL pipelines through schema standardization, partitioning, and performance tuning.	

Projects

RAG-Enhanced NL2SQL Intelligence System <i>Python, SQL, LangChain, LLM, Embeddings, ChromaDB, NLP, REST APIs</i>
- Engineered a RAG-powered NL2SQL system using LangChain, HuggingFace Embeddings, and ChromaDB, enabling natural language querying over a 20,000+ SKU inventory database with context-aware schema retrieval and accurate SQL generation. - Architected a multi-layer LLM inference pipeline integrating semantic retrieval, prompt engineering, and structured SQL execution, delivering real-time inventory insights via an interactive Streamlit dashboard. - Built a modular, production-ready application following REST API design principles, ensuring extensibility and seamless integration of additional LLM components or data sources.
Automated Fundus Image Screening <i>CNNs, Transfer Learning (ConvNeXtV2), PyTorch, FastAPI</i>
- Built a ConvNeXtV2-based deep learning model with transfer learning for multi-label fundus image classification (Cataract, Glaucoma, Diabetic Retinopathy) using 5,000+ images from ODIR-2019. - Fine-tuned the Qwen3 LLM using LoRA/QLoRA on a medical dataset to develop a domain-specific AI medical chatbot. - Engineered a robust image preprocessing augmentation pipeline (PyTorch) to improve generalization and handle class imbalance. - Developed a production-grade React web application with doctor and patient interfaces for real-time fundus image upload, AI-based inference, and confidence visualization.
